Welcome to your Summative Assessment!

This document deals with the summative assessment of your competence towards the outcomes which you need to achieve. "Summative Assessment is assessment for making a judgement about achievement. This is carried out when a learner is ready to be assessed at the end of a programme of learning" (SAQA: Criteria and Guidelines for Assessment Policy Document,).

ASSESSMENT APPEALS PROCEDURE

1. A learner has the right to appeal under the following circumstances
 - If the laid down assessment procedures were not followed during assessments
 - If not all evidence available was taken into account during the assessment
 - The assessor was not a subject matter expert or did not have a subject matter expert during the assessment process
 - The assessor did not assess according to the performance criteria and range statement stipulated in the unit standard
 - Not all the range items were available for assessment
2. A learner bringing an appeal against a decision of the assessment will lodge such an appeal with the assessor and the internal moderator within 2 days of the assessment feedback session.
3. A learner bringing an appeal should complete the "Learner's Notice of Assessment Appeal" form before the Appeal Hearing. The form should be handed to the internal moderator or a representative of the SETA.
4. Should the internal moderator re-affirm the assessor's decision, the learner may appeal to the external verifier within 2 days after the initial moderator's feedback session. The external verifier's decision will be final. Should the external verifier re-affirm the assessors' decision, the cost for re-evaluation will be upon the learner. Should the verifier's decision differ from the assessor's decision, the cost for re-evaluation will be borne by the assessor.

ASSESSMENT APPEAL APPLICATION FORM

LEARNER'S NOTICE OF ASSESSMENT APPEAL

TO: The Internal Moderator

A meeting with the internal moderator is hereby requested to discuss the outcome of my assessment.

Internal moderator name _____

Date of submission: _____

Name of employee assessed: _____

Name of Assessor: _____

PRE-ASSESSMENT MEETING CHECKLIST

Points Assessor must cover in the initial meeting with the learner - Please tick

Item	Points to be covered	Tick
1	Welcome the candidate and put them at ease	✓
2	Explain the purpose of the meeting (why you are there and how long the meeting will take)	✓
3	Explain the ▪ NQF ▪ Credits ▪ Certification process ▪ Learning pathways	✓
4	Explain ▪ Who is involved in the assessment and their role (learners, coach, assessors, managers, moderators) ▪ Principles of assessment (fairness, confidentiality, validity, sufficiency)	✓
5	Explain the assessment process? ▪ Check learner readiness for assessment (logbook / self assessment) ▪ Assessment contract to be completed ▪ Preparation of learner (this meeting) ▪ The assessment (observation and knowledge questionnaire) ▪ Judgement of the evidence ▪ Outcome of assessment (competent, not yet competent, need further evidence)	✓
6	Give Learner copies of the following documentation and explain each document ▪ The Assessment Guide which includes ○ The relevant unit standard (s) ○ Assessment contract ○ Assessment plan ○ Observation checklist ○ Knowledge checklist	✓
7	Discuss the assessment plan (complete the assessment plan document) ▪ Allow the learner to participate in the decisions made ▪ Agree on dates, time and venue for the assessment and feedback ▪ Agree on evidence the learner can submit ▪ Agree and explain the assessment methods ▪ Identify and discuss special assessment needs of the candidate ▪ Identify and eliminate unfair barriers (language, disability etc) ▪ Discuss and agree on witness requirements	✓
8	Tell the candidate his/her rights and responsibilities, the assessment procedures and policies ▪ How many times they may be assessed ▪ Appeals process / procedure ▪ Reassessment policy	✓
9	Ensure the assessment environment is appropriate or make special arrangements	✓
10	Discuss moderation	✓
11	Allow the learner opportunity to clarify any items discussed	✓

Learner declaration of acceptance of assessment instruments and relevant documentation: Date:	
Learners Name: <i>Munyisi Ndabeni</i>	Signature <i>[Signature]</i>
Assessors Name:	Signature:

INSTRUCTIONS:

The following sections will test your knowledge, and you are required to answer all the questions.

All true and false items must be answered.

Once you have finished you may obtain feedback from your assessor on the accuracy of your answer.

LEARNING UNIT 1:

Safety, health, environment, risk and quality principles in the workplace

Learning Outcome 1:	KT0201 Legislation and regulations for workplace safety within electricity
Learning Outcome 2:	KT0202 Occupation health and safety legislation
Learning Outcome 3:	KT0203 Safety precautions and safe practices for working within industry
Learning Outcome 4:	KT0204 Personal protective equipment
Learning Outcome 5:	KT0205 Safety symbols and colour coding
Learning Outcome 6:	KT0206 Fundamentals of isolating and locking out equipment and circuits
Learning Outcome 7:	KT0207 Fundamentals of securing worksites
Learning Outcome 8:	KT0208 Protection devices
Learning Outcome 9:	KT0209 Causes, prevention and control of fires
Learning Outcome 10:	KT0210 Hazard identification and risk principles
Learning Outcome 11:	KT0211 Environmental, protection and pollution concepts
Learning Outcome 12:	KT0212 Basic first Aid
Learning Outcome 13:	KT0213 Incident reporting.
Learning Outcome 14:	KT0214 Evacuation procedures.

Task	Questions Description	Marks
1	What are the ways to reduce the risk of an electrical shock	5

Reducing the risk of electrical shock involves installing ground fault circuit interrupters (GFCIs) in wet areas, regularly inspecting cords for damage, and turning off power before repairs. Always keep appliances away from water, avoid overloading outlets, use child-resistant covers and ensure proper grounding of equipment.

Task	Questions Description	Marks
2	What are the responsibility for electrical installation	6

User/Lessor (Owner/Tenant): Responsible for the safety, maintenance, and safe use of the installation, they must ensure no tampering occurs and hold a valid CoC.

Property owner vs Tenant: The responsibility falls on the person using the property, but it can be transferred to a tenant through a written agreement.

Installation and maintenance: installing, repairing, and maintaining wiring, lighting and control system.

Safety adherence: Preventing electrical hazards and adhering to legal regulations, such as those governing electrical installations.

Task	Questions Description	Marks
3	Name 5 functions of approved inspection authorities for electrical installation.	5

Inspecting and testing electrical installations to verify compliance with safety standard.

Issuing Certificate of Compliance (COC) or Validation certificates after thorough evaluation.

Testing of installations perform electrical tests to verify that installations are safe for use.

Auditing registered electrical contractors evaluate and monitor the work of registered electrical contractors to ensure ongoing compliance with applicable electrical codes and safety regulations.

Investigation of electrical incidents, faults or non-compliant contractors to ensure installation and provide reports.

Task	Questions Description	Marks
4	Where a regulation is highlighted read it in your SABS Code of practice. Wiring techniques colors of wire-Regulation 5.2.1 What are the single-phase color code?	3

According to the South African wiring code SANS 10142-1 issued by South African Bureau of Standard; the single-phase colour code live (Brown), neutral (Blue), Earth (Green/Yellow)

In singlephase electrical wiring, colour code are used to identify the function of each conduct mainly live (line/hot), neutral and earth (ground).

Task	Questions Description	Marks
5	Identify and explain 10 various types of personal protective equipment	10

Rubber insulating gloves: Crucial for protecting hands from electrical shock, they are categorized by voltage rating and often worn with leather protectors to prevent punctures.

Voltage-rated boots: Dielectric footwear with non-conductive soles prevents electricity from traveling through the body to the ground.

Arc-rated face shield: protects the face from thermal burns and flying debris during an arc flash incident.

Hard Hat: Non-conductive, dielectric helmets protect the head from impact and electric shock from energized conductors.

Flame resistant clothing: Long-sleeved shirts, pants or coveralls designed to self-extinguish, preventing or reducing burn injuries from arc flashes.

Arc flash suit: A full body, high level protection suit worn when working on high voltage equipment to protect against intense heat.

Insulating rubber sleeves: Protects arms and shoulders from accidental contact with live components.

Safety glasses with side shields: Non-conductive eyewear that protects against sparks, debris and UV light.

Earplugs: Protects hearing while providing insulation against electrical currents, crucial in noisy electrical rooms.

Insulating mats: Placed on the floor in front of electrical panels to provide an additional insulating layer for the worker.

10

Task	Questions Description	Marks
7	Give 5 safety precautions when working with electrical equipment	5

~~De-energize~~ equipment (Lockout/Tagout)! Always turn off the power source.

Inspect before use: Check for frayed wires, damage insulation before connecting power.

Keep dry and avoid wet surfaces: Never operate electrical equipment with wet hands to prevent electrocution.

Use proper personal protective equipment.

Use grounded equipment: Ensure all tools and equipment have three prong plugs

5

Task	Questions Description	Marks
8	Name 5 unsafe conditions in a workplace	5
	Name 5 unsafe act in a workplace	5
	Name 5 points for good housekeeping	5

1 Damage insulation

Overloaded circuits

Wet conditions ✓

Improper grounding ✓

Exposed electrical parts ✓

2 Using defective tools or equipment

Overloading circuits and outlets

~~Ignoring~~ Ignoring electrical equipment

Ignoring lockout or tagout procedure

m

Operating electrical equipment in wet condition
Working near overhead power lines

2

3. Keep electrical equipment dry never mix water and electricity.

• Maintain clean areas keep workplace, shelves and electrical cabinets free from dirt.

• Organize cables and cords properly manage cords avoiding overstretching.

• Regular safety inspections routinely check equipment.

• Safe cleaning methods use insulated, avoid direct spraying of cleaning solutions on electrical components.

Task	Questions Description	Marks
9	Write whether the statement is TRUE or FALSE	5

Protection for the human body is provided by an earthing. True if the human body is not insulated from the ground and comes in contact with the circuit, there will be a shock. True

If you do use mains voltage in a project, then you should normally use a metal case and earth case. True

A fuse contains a short piece of wire which melts if too much current flows. True

A circuit breaker contains an element that heats, bends and triggers a spring which shunts the circuits down. True

5

Task	Questions Description	Marks
10	Name four classes of fire and their description	4

Class A (Ordinary combustibles): While not inherently electrical, these fires are often ignited by electrical faults.

Class B (Flammable liquids/gases): These involve flammable substances like oil based coolants, alcohol which can catch fire if an electrical spark.

Class C (Energized electrical fires): These fires involve active electrical equipment, such as overloads circuits, faults wiring.

Class D (Combustible metals): These fires involve metals such as magnesium, titanium or lithium.

Task	Questions Description	Marks
11	Why lockout/tag out important?	2
	What is the purpose of a lockout/tag?	2
	What does de-energization mean?	2
	What should lockout procedures and work instruction contain?	4

Preventing unexpected startup ensuring equipment cannot be turned on while someone is working on it.

It is to prevent injury or death by ensuring that equipment is fully de-energized, isolated and locked against accidental startup during maintenance.

De-energization is the process of disconnecting or isolating machinery, equipment, or electrical system from all energy sources to ensure no power flows to it.

5 Identification of hazardous energy
Step-by-step shutdown and isolation
Location of energy-isolating device
Verification of isolation
Store energy release
Clearance and restart

About the Formative Assessment

Purpose	The purpose of this Formative Assessment is to evaluate learners understanding on the specific outcomes and/or assessment criteria and prepare the learner for the summative assessment. This will show that the learner is ready to be assessed.
Context	This assessment represents the Formative Assessment component and should be completed in the classroom/training room.
Resources	The following are resources needed for this assessment: 1. Learner Guide; and 2. Assessment Preparation.
Instructions to Facilitators	Facilitators will be required to: • Explain the completion of the Formative Assessment to each learner; and • Interview the learner on similar questions, should he/she not be able to write.
Instructions to Learners	Learners will be required to: • Complete the Formative Assessment as per the instructions. • Ensure that all questions are completed. • Ensure that the completion of the workbook is their own work. • Ensure that all annexures are attached to the workbook and clearly referred to;
Assessment Time	Learners are required to complete this assessment within the allocated time frame/hours.

Total Mark 80%	This formative assessment carries a total mark of _ points . In order to meet the pass mark, learners are required to achieve a minimum of 80% of the total marks.

ASSESSMENT APPEALS PROCEDURE

1. A learner has the right to appeal under the following circumstances
 - If the laid down assessment procedures were not followed during assessments
 - If not all evidence available was taken into account during the assessment
 - The assessor was not a subject matter expert or did not have a subject matter expert during the assessment process
 - The assessor did not assess according to the performance criteria and range statement stipulated in the unit standard
 - Not all the range items were available for assessment
2. A learner bringing an appeal against a decision of the assessment will lodge such an appeal with the assessor and the internal moderator within 2 days of the assessment feedback session.
3. A learner bringing an appeal should complete the "Learner's Notice of Assessment Appeal" form before the Appeal Hearing. The form should be handed to the internal moderator or a representative of the SETA.
4. Should the internal moderator re-affirm the assessor's decision, the learner may appeal to the external verifier within 2 days after the initial moderator's feedback session. The external verifier's decision will be final. Should the external verifier re-affirm the assessors' decision, the cost for re-evaluation will be upon the learner. Should the verifier's decision differ from the assessor's decision, the cost for re-evaluation will be borne by the assessor.

ASSESSMENT APPEAL APPLICATION FORM

LEARNER'S NOTICE OF ASSESSMENT APPEAL

TO: The Internal Moderator

A meeting with the internal moderator is hereby requested to discuss the outcome of my assessment.

Internal moderator name _____

Date of submission: _____

Name of employee assessed: _____

Name of Assessor: _____

Date of feedback session: _____

Grounds for Appeal

No	Tick the applicable ground(s) for appeal	Tick
1	The assessment did not follow the laid down procedure

PRE-ASSESSMENT MEETING CHECKLIST

Points Assessor must cover in the initial meeting with the learner - Please tick

Item	Points to be covered	Tick
1	Welcome the candidate and put them at ease	✓
2	Explain the purpose of the meeting (why you are there and how long the meeting will take)	✓
3	Explain the ▪ NQF ▪ Credits ▪ Certification process ▪ Learning pathways	✓
4	Explain ▪ Who is involved in the assessment and their role (learners, coach, assessors, managers, moderators) ▪ Principles of assessment (fairness, confidentiality, validity, sufficiency)	✓
5	Explain the assessment process? ▪ Check learner readiness for assessment (logbook / self assessment) ▪ Assessment contract to be completed ▪ Preparation of learner (this meeting) ▪ The assessment (observation and knowledge questionnaire) ▪ Judgement of the evidence ▪ Outcome of assessment (competent, not yet competent, need further evidence)	✓
6	Give Learner copies of the following documentation and explain each document ▪ The Assessment Guide which includes ○ The relevant unit standard (s) ○ Assessment contract ○ Assessment plan ○ Observation checklist ○ Knowledge checklist	✓
7	Discuss the assessment plan (complete the assessment plan document) ▪ Allow the learner to participate in the decisions made ▪ Agree on dates, time and venue for the assessment and feedback ▪ Agree on evidence the learner can submit ▪ Agree and explain the assessment methods ▪ Identify and discuss special assessment needs of the candidate ▪ Identify and eliminate unfair barriers (language, disability etc) ▪ Discuss and agree on witness requirements	✓
8	Tell the candidate his/her rights and responsibilities, the assessment procedures and policies ▪ How many times they may be assessed ▪ Appeals process / procedure ▪ Reassessment policy	✓
9	Ensure the assessment environment is appropriate or make special arrangements	✓
10	Discuss moderation	✓
11	Allow the learner opportunity to clarify any items discussed	✓

Learner declaration of acceptance of assessment instruments and relevant documentation: Date:	
Learners Name: <i>Munyisi Ndabeni</i>	Signature: <i>[Signature]</i>
Facilitator Name: <i>Balernah Tjabadi</i>	Signature: <i>[Signature]</i>

Complete the following questions as per instructions provided

LEARNING UNIT 1:

Safety, health, environment, risk and quality principles in the workplace

Learning Outcome 1:	KT0201 Legislation and regulations for workplace safety within electricity
Learning Outcome 2:	KT0202 Occupation health and safety legislation
Learning Outcome 3:	KT0203 Safety precautions and safe practices for working within industry
Learning Outcome 4:	KT0204 Personal protective equipment
Learning Outcome 5:	KT0205 Safety symbols and colour coding
Learning Outcome 6:	KT0206 Fundamentals of isolating and locking out equipment and circuits
Learning Outcome 7:	KT0207 Fundamentals of securing worksites
Learning Outcome 8:	KT0208 Protection devices
Learning Outcome 9:	KT0209 Causes, prevention and control of fires
Learning Outcome 10:	KT0210 Hazard identification and risk principles
Learning Outcome 11:	KT0211 Environmental, protection and pollution concepts
Learning Outcome 12:	KT0212 Basic first Aid
Learning Outcome 13:	KT0213 Incident reporting.
Learning Outcome 14:	KT0214 Evacuation procedures.

Task	Questions Description	Marks
1.	Identify and explain various types of personal protective equipment	10

1 Head Protection (Helmets): Protects against falling objects, impacts and electrical hazards in industrial settings.

- 2) Eye and face protection (goggles & shields): Shields against flying debris, chemical splashes and intense light.
- 3) Hearing Protection (Earplugs): Reduces noise exposure in high-decibel environments to prevent hearing loss.
- 4) Hand and Arm protection (Gloves): Specialized gloves (cut-resistant, heat-resistant or disposable) protection against infections and cuts.
- 5) Foot Protection (Safety boots): Protection against crushing injuries, slips, punctures and falling objects.
- 6) Body Protection (Overalls, vests/Apron): Protects skin and clothing from hazardous substances, heat or fire. High visibility clothing ensures workers are seen in traffic or low light.

Task	Questions Description	Marks
2	Identify and describe Safety signs in terms of associated risk and safe conduct	10

Electrical safety signs use color-coded, standardized shapes to indicate risk and direct safe conduct, preventing hazards like shock or fire. Key types include yellow triangular warning (hazard), blue circular mandates (action), red circular prohibitions (restricted), and green squares (safe, emergency conditions).

Prohibition Signs (red circle) risks action that cause, accelerate or worsen an electrical hazard.

Mandatory Signs (blue circle) risks shows the hazards requiring specific protective measure to prevent injury.

Warning Signs (Yellow triangle) show the risk of high voltage, electric shock, risk of fire, or hazardous machinery.

Emergency/Information Signs (Green circle) shows the risks of situations requiring rapid escape or access to first aid.

Fire Safety Signs (Red rectangle/square)

Associated risk: Indicates the location of fire-fighting equipment (e.g. fire extinguishers, hoses).

Safe conduct: Note the location of equipment for emergency use or yellow evacuation routes.

Appearance: Red background with white text or symbols.

11 10

Task	Questions Description	Marks
3	Explain the inter-relationship between workplace safety and a productive work environment	7

Workplace safety and productive are positively, deeply interdependent, acting as two sides of the same coin rather than competing goals.

A safe environment reduces costly interruptions (absenteeism, repair), boosts employee morale, and encourages focus, directly leading to higher quality, efficiency and consistent output.

Key Aspects of the interrelationship.

1) Minimized disruptions and reduced downtime:

When workplaces prioritize safety, they experience fewer accidents, injuries and illness. This prevents major disruptions to operations, as fewer hours are lost to investigation or due to injured employees being absent.

2) Boosted employee engagement and morale: A safe environment signals that the company values its employees, fostering trust and loyalty. This morale boosts employee engagement and motivation, making them more committed and efficient in their work.

3) Improved focus and reduced stress: Employees working without fear of injury or health hazards can concentrate better on their tasks. This reduction in anxiety and physical stress enables higher quality work and efficiency. Enhanced operational efficiency: Safety regulations and protocols often lead to cleaner, more organized workplaces. This organizational improvement streamlines processes, making it easier to maintain a steady, productive work flow.

Task	Questions Description	Marks
4	Describe the regulations for the prevention and control of fires and the causes, effect and implication of fires	9

The regulations for fire prevention and control consist of Risk management & compliance, ~~fire~~ emergency procedures (clearly marked), maintenance & training and safety standards. The causes of electrical fires are as follows: overloaded circuits, damaged/old wiring, poor maintenance, and negligence.

The life and implications of electrical fires consist of immediate damage, operational disruption, legal & financial ~~to~~ liability and toxic fumes.

The key to prevent these measures always: unplug devices, inspection, qualified personnel and containment.

Regulations for prevention and control.

Preventative measures: Requirements include installing smoke detectors, fire alarms, and sprinkler systems, as well as keeping escape routes and passageway clear of obstructions.

Cause of fires

Electrical faults: Overloaded sockets, faulty wiring, and damaged extension cords are major culprits.

Effects of fires

Physical Danger: Immediate threats to human life from smoke inhalation, burns, and structural collapses.

Implications of fires

Economic loss: Loss of assets, business interruption, and high costs for clean up and reconstruction.

9

m

Task	Questions Description	Marks
5	What are the risk of fire and explosion	8

When one socket outlet is overloaded with a lot of plugs or high current going through a particular component that can lead to sparking or explosion of fire.

Using electricity incorrectly can lead to the electrocution.

Faulty Wiring and equipment: Damaged, frayed, or old electrical cables, along with poorly maintained appliances, can cause insulation to fail and sparks to occur.

Overloaded circuits which is plugging too many devices into a single outlet or using undersized wiring causes overheating, which can ignite surrounding materials.

Arc flash and Arc blast: Short circuits can release immense energy, creating temperature up to 3000°C , leading to severe burns and explosions.

11/5

Task	Questions Description	Marks
6	Functions of approve inspection authorities for electrical installations	12

Inspections occur when requested by a property owner, user or instructed by the Chief inspector or Provincial director.

Verification of compliance examine, test, and verify that electrical installations, including equipment and wiring, are safe and compliant with regulations.

Approved inspection authorities for electrical installation shall be accountable by a code of ethics determined by the chief inspector.

Submit a report detailed report regarding their findings to the client who requested the inspection.

715

Task	Questions Description	Marks
7	Explain and describe earthing	12

Earthing is a critical safety mechanism that connects the ~~metal~~ metallic, non-current-carrying parts of electrical equipment to the ground via a low-resistance path. Its primary purpose is to safely redirect leakage or fault current to the earth, triggering circuit breakers and preventing electric shocks, fire and equipment damage.

~~In essence~~

Earthing create a safe, intended, low-resistance route for electricity to escape to the earth, rather than through a person.

To receive an electric shock, a person must become part of an electric circuit and ~~current~~ current must flow through the body. It is the current passing through the body that is dangerous.

Task	Questions Description	Marks
8	Why lockout/tag out important?	4
	What is the purpose of a lockout/tag?	3
	What does de-energization mean?	3
	What should lockout procedures and work instruction contain?	10

1) Lockout/Tagout is critical for electrical safety because it physically prevents the accidental re-energization of machinery, protecting workers from electrocution, burns, and severe injury. It ensures that all hazardous, stored, or residual energy is isolated during maintenance, complying with OSHA standards to prevent fatal accidents.

2) The purpose of electrical lockout/tagout is to prevent fatal accidents, injuries and equipment damage by ensuring machinery is completely de-energized, isolated from power sources and cannot be restarted while being serviced.

3 De-energization is the process of disconnecting machinery, equipment or electrical system from all power sources (electrical, mechanical, hydraulic or pneumatic) to ensure no energy flows to it.

4) Electrical lockout procedures must provide clear, step-by-step instructions for safely de-energizing equipment to prevent injury.

Clear, step by step instructions for specific equipment. Required PPE for the job. Detailed location of isolation points. Specific testing instruments required for verification.

Essential components of electrical LOTO procedures are preparation and identification, Shutdown procedures, Isolation steps, lockout and Tagout application.

Key Components of LOTO procedures

Specific machine identification: Detailed identification of the machine, equipment, or process requiring LOTO.

Energy sources identification: Detailed listing of all hazardous energy sources - electrical, pneumatic, hydraulic, chemical, thermal, and mechanical.

Shutdown procedures: Precise steps for bringing down the machinery, including notifying affected employees.

Isolation methods: Clear instructions on isolating energy by closing valves and devices to be isolated and location of all energy-isolating devices.

Lockout device application: Instruction on where to install lockout devices, which devices to use, and who is authorized to apply them.

Task	Questions Description	Marks
9	Verify isolation explain the several ways to be followed	8

Proving dead (Test dead method): Test the voltage indicator, test the equipment and retest the voltage indicator.

Physical separation: open ~~iso~~ isolators, remove fuses, or disconnect cables to create a visible, physical break in the circuit.

Lock-out/Tag-out: Apply locks and personal tags to the disconnection device, such as circuit breakers or ~~switch~~ switches, to prevent unauthorized re-energization.

Voltage Testing (electrical): Use a calibrated two-pole voltage indicator to test for zero voltage between all combinations of conductors (phases, neutral, and earth).

Test start / "Try-out": Attempt to operate the machinery or equipment via the normal controls (e.g. push buttons, switches) to confirm it does not start.

Pressure/Gauge check (chemical): Check pressure gauges to confirm they read zero.

Physical inspection: Visually check that physical breaks, such as removed pipes, blanked lines, or open circuit breakers, are in place.

Bleeding/Ventilation: Open drain or vent valves to ensure no pressurized fluids or gases remain trapped.

8

Task	Questions Description	Marks
------	-----------------------	-------

10	Name four classes of fire and their description	4
----	---	---

- a) Ordinary combustibles: fire in solids like wood, paper, cloth, plastic. While not inherently electrical.
- b) Flammable liquids/gases: fires fueled by substances like gasoline, oil or paints.
- c) Energized electrical fires: Involves live electrical equipment, such as wiring, motors, appliances, circuit breakers.
- d) Combustible metals: fires involving metals such as magnesium, titanium, potassium.

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

OUTCOMES		1	2	3
1	Legislation and regulations for workplace safety within electricity			✓
2	Safety precautions and safe practices for working within industry			✓
3	Personal protective equipment			✓
4	Fundamentals of isolating and locking out equipment and circuits			✓

Application for Assessment

First Attempt ☐ Second Attempt ☐ Third Attempt ☐ RPL ☐

Observer/Witness required: Yes/No

Name: _____

Contact Number: _____

Interpreter required: Yes/No

Name: _____

Contact Number: _____

Was Employer informed of request for Assessment: Yes/No

Type of Assessment: Theoretical

Practical

Recommendation for Assessment

The applicant has completed his/her training, has prepared for the assessment and is now ready to be assessed.

The ETD Practitioner believe that the candidate is ready for the assessment because he has completed the relevant unit standard.

Notification of Assessment

Assessment will take place as follows:

	Theory	Practical
Date		
Time	9H00	9H00
Venue	Employer premises	Employer premises
Instruments	Written assignment	Practical Assessment

Action required from candidate:

Candidate need to prepare him/herself to either write the Questionnaire or conduct Practical Assessment in order to achieve competency towards the relevant unit standard.

ETDP PRACTITIONE

Assessment Planning

	<u>Theory</u>	<u>Practical</u>
Date of assessment:		
When would be the best time for the Assessment?	9H00	9H00

Have you received an application to assess the candidate? Yes

What assessment methods do you consider using? (observation, assignment, presentation, etc.) Explain method.

1. Written Assignment : Printed Questionnaire
2. Observation : As per Practical Assessment Guide
3. Interview : List of Questions as per Practical Assessment Guide after Practical Observation

What resources would you require to conduct the assessment?

1. Assessor toolkit
2. Theoretical assignment
3. Practical assessment
4. Learner toolkit

How would you sequence your activities? Explain

1. Record preparation process
2. Meet with group/candidate and explain assessment procedure – how you are going to conduct the assessment
3. Learner will write summative assessments
4. Conduct observation in workplace where applicable
5. Complete learner toolkit
6. Complete assessor toolkit

About the Formative Assessment

Purpose	The purpose of this Formative Assessment is to evaluate learners understanding on the specific outcomes and/or assessment
----------------	---

	criteria and prepare the learner for the summative assessment. This will show that the learner is ready to be assessed.
Context	This assessment represents the Formative Assessment component and should be completed in the classroom/training room.
Resources	The following are resources needed for this assessment: 1. Learner Guide; and 2. Assessment Preparation.
Instructions to Facilitators	Facilitators will be required to: • Explain the completion of the Formative Assessment to each learner; and • Interview the learner on similar questions, should he/she not be able to write.
Instructions to Learners	Learners will be required to: • Complete the Formative Assessment as per the instructions; • Ensure that all questions are completed; • Ensure that the completion of the workbook is their own work; • Ensure that all annexure are attached to the workbook and clearly referred to;
Assessment Time	Learners are required to complete this assessment within the allocated time frame/hours.
Total Mark	This formative assessment carries a total mark of _ points . In order to meet the pass mark, learners are required to achieve a minimum of 80% of the total marks.

Learner declaration of acceptance of assessment instruments and relevant documentation: Date:	
Learners Name:	Signature 
Facilitator Name:	Signature: 

Complete the following questions as per instructions provided

LEARNING UNIT 1:

KM-02-KT01: Hand tools and power tools (50%)

Learning Outcome 1:	KT0101 Types, uses and care of hand tools
Learning Outcome 2:	KT0102 Types, uses and care of portable power tools
Learning Outcome 3:	KT0103 Types, uses and care of fixed power tools

Task	Questions Description	Marks
1.	Identify portable power tools and describe their uses Identify fixed power tools and describe their uses	10

- (i) Cordless/Electric drill: Used for drilling holes and driving screws into various materials like wood, metal and a workpiece.
 - (ii) Impact driver: Utilizes high torque for fastening heavy-duty screws and loosening stubborn nuts.
 - (iii) Angle grinder: A versatile tools for cutting, grinding, and polishing metal, stone or tile.
 - (iv) Circular Saw: Used for making fast, straight cuts in wood, metal, and masonry.
 - (v) Reciprocating saw: Designed for rough cutting and demolition work.
 - (vi) Jigsaw: Used for intricate, curved cuts in materials.
 - (vii) Sanders (Orbital/Belt): Used for smoothing, polishing or cleaning surfaces.
 - (viii) Hole saw: Attached to drills to create large-diameter holes, often used by electricians for cable access.
- Table

Table saw: A motor driven circular blade protruding through a table, used for accurate, high volume straight, bevel and rip cuts.

Drill press: A fixed drilling machine used for high precision, vertical, or angled hole drilling that portable drills cannot achieve.

Band saw: Uses a continuous blade to cut complex shapes and curves in wood or metal.

Bench grinder: Used for sharpening tools (chisels, drill bits) and grinding metal.

LEARNING UNIT 2:**KM-02-KT02: Measuring and testing instruments (50%)**

Learning Outcome 1:	KT0201 Portable electrical measuring instruments
Learning Outcome 2:	KT0202 Types of electrical measuring and testing instruments
Learning Outcome 3:	KT0203 Safe use of measuring and testing instruments
Learning Outcome 4:	KT0204 Construction and operating principles of measuring and testing instruments
Learning Outcome 5:	KT0205 Methods of connecting measuring and testing instruments in circuits
Learning Outcome 6:	KT0206 Applications and methods of using electrical measuring and testing instruments
Learning Outcome 7:	KT0207 Care and maintenance of single and three phase measuring and testing instruments
Learning Outcome 8:	KT0208 Instrument transformers
Learning Outcome 9:	KT0209 Types and functions of panel mounted electrical measuring and testing instruments
Learning Outcome 10:	KT0210 Safe use of panel mounted measuring and test instruments
Learning Outcome 11:	KT0211 Protection of measuring instruments when connected in a circuit.

Task	Questions Description	Marks
2	a) Identify different types of electrical measuring instruments including fixed and portable and state the purpose. b) Explain by means of circuit diagrams how a ammeter, voltmeter is directly connected and	5

M

	indirectly connected by using instrument transformers.	
--	--	--

1) **Multimeter**: measures multiple parameters, including AC/DC Voltage, current and resistance in single, versatile device.

Clamp meter: Measures high AC/DC current without needing to break or disconnect the circuit, using clamping.

Megohmmeter: Specifically measures the insulation resistance of cables, motors and high-voltage equipment.

Oscilloscope: displays and analyzes electrical ~~path is completed~~ signal waveforms to observe signal behavior.

Panel Ammeter: continuously displays the current flow through a specific branch or piece of equipment.

Panel Voltmeter: Monitors the voltage level of system to ensure it is within operating limits.

2)

Task	Questions Description	Marks
3	Explain the function of the wattmeter (electrodynamometer type), kilowatt-hour meter, frequency meter, power factor meter and maximum demand meter	5

Electrodynamometer type (Wattmeter): it measures active power (in Watts or kilowatts) in both AC/DC units.

Kilowatt-hour (kWh) meter: measures and records the total amount of electrical energy consumed over a period (in kWh).

Frequency meter: measure the frequency of an AC power supply (measured in Hertz Hz).

Maximum Demand meter:
~~Power factor meter~~ : Measures and records the highest average power consumption (maximum demand) over a set, short, specific period.

Power factor meter: measures the power factor (cos ϕ) of an AC unit, which is the ratio of real power to apparent power.

Task	Questions Description	Marks
4	Illustrate, by means of circuit diagrams, how the wattmeter (electrodynamometer type), kilowatt-hour meter, frequency meter, power factor meter and maximum demand meter are connected in single and three phase circuits:	10

1. Wattmeter (electrodynamometer type)

1a) Single Phase

2

2) Kilowatt-Hour (KWh) meter

(a) Single phase

3) Frequency meter

(a) Single phase

4) Power factor meter

Single phase

5) Maximum demand meter

Single phase

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

LEARNER FEEDBACK & COMMENTS

Good work

DECLARATION BY THE FACILITATOR

I Balerinah Tjabadi (Facilitator) hereby certify that I have examined the learner workbook and I am satisfied with the evidence provided by the learner.

DECLARATION BY LEARNER			
I, <u>Mungis Mdabeni</u>.....declare that I am satisfied that the feedback given to me by the Facilitator was relevant, sufficient and done in a constructive manner. I accept the assessment judgment and have no further questions relating to this particular assessment event.			
			
Learner	Date	Facilitator	Date

DECLARATION BY THE ASSESSOR			
I, <u>Balermah Tjabadi</u>..... (Assessor) hereby certify that I have examined the learner workbook and I am satisfied with the Facilitator Judgment of this assessment.			
			
Assessor	Date	Moderator	Date

Application for Assessment

First Attempt ☐ Second Attempt ☐ Third Attempt ☐ RPL ☐

Observer/Witness required: Yes/No

Name: _____

Contact Number: _____

Interpreter required: Yes/No

Name: _____

Contact Number: _____

Was Employer informed of request for Assessment: Yes/No

Type of Assessment: Theoretical

Practical

Recommendation for Assessment

The applicant has completed his/her training, has prepared for the assessment and is now ready to be assessed.

The ETDP Practitioner believe that the candidate is ready for the assessment because he has completed the relevant unit standard.

Notification of Assessment

Assessment will take place as follows:

	Theory	Practical
Date		
Time	9H00	9H00
Venue	Employer premises	Employer premises
Instruments	Written assignment	Practical Assessment

Action required from candidate:

Candidate need to prepare him/herself to either write the Questionnaire or conduct Practical Assessment in order to achieve competency towards the relevant unit standard.

ETDP PRACTITIONER

Assessment Planning

	<u>Theory</u>	<u>Practical</u>
Date of assessment:		
When would be the best time for the Assessment?	9H00	9H00

Have you received an application to assess the candidate? Yes

What assessment methods do you consider using? (observation, assignment, presentation, etc.) Explain method.

1. Written Assignment : Printed Questionnaire
2. Observation : As per Practical Assessment Guide
3. Interview : List of Questions as per Practical Assessment Guide after Practical Observation

What resources would you require to conduct the assessment?

1. Assessor toolkit
2. Theoretical assignment
3. Practical assessment
4. Learner toolkit

How would you sequence your activities? Explain

1. Record preparation process
2. Meet with group/candidate and explain assessment procedure – how you are going to conduct the assessment
3. Learner will write summative assessments

4. Conduct observation in workplace where applicable
5. Complete learner toolkit
6. Complete assessor toolkit

ASSESSMENT APPEALS PROCEDURE

1. A learner has the right to appeal under the following circumstances
 - If the laid down assessment procedures were not followed during assessments
 - If not all evidence available was taken into account during the assessment
 - The assessor was not a subject matter expert or did not have a subject matter expert during the assessment process
 - The assessor did not assess according to the performance criteria and range statement stipulated in the unit standard
 - Not all the range items were available for assessment
2. A learner bringing an appeal against a decision of the assessment will lodge such an appeal with the assessor and the internal moderator within 2 days of the assessment feedback session.

3. A learner bringing an appeal should complete the "Learner's Notice of Assessment Appeal" form before the Appeal Hearing. The form should be handed to the internal moderator or a representative of the SETA.
4. Should the internal moderator re-affirm the assessor's decision, the learner may appeal to the external verifier within 2 days after the initial moderator's feedback session. The external verifier's decision will be final. Should the external verifier re-affirm the assessors' decision, the cost for re-evaluation will be upon the learner. Should the verifier's decision differ from the assessor's decision, the cost for re-evaluation will be borne by the assessor.

ASSESSMENT APPEAL APPLICATION FORM

LEARNER'S NOTICE OF ASSESSMENT APPEAL

TO: The Internal Moderator

A meeting with the internal moderator is hereby requested to discuss the outcome of my assessment.

Internal moderator name _____

Date of submission: _____

Name of employee assessed: _____

Name of Assessor: _____

Date of feedback session: _____

Grounds for Appeal

No	Tick the applicable ground(s) for appeal	Tick
1	The assessment did not follow the laid down procedure	
2	Not all evidence available was taken into account during the assessment	
3	The assessor was not a subject matter expert nor was a subject matter expert present during the assessment process	
4	The assessment was not according to the performance criteria and the range statement stipulated in the unit standard	
5	Not all the range items were available for the assessment	

Reasons for Appeal

No	Please give detailed reasons for the choice(s) above
1	
2

Employee witness: _____ Date: _____

PRE-ASSESSMENT MEETING CHECKLIST

Points Assessor must cover in the initial meeting with the learner - Please tick

Item	Points to be covered	Tick
1	Welcome the candidate and put them at ease	✓
2	Explain the purpose of the meeting (why you are there and how long the meeting will take)	✓
3	Explain the ▪ NQF ▪ Credits ▪ Certification process ▪ Learning pathways	✓
4	Explain ▪ Who is involved in the assessment and their role (learners, coach, assessors, managers, moderators) ▪ Principles of assessment (fairness, confidentiality, validity, sufficiency)	✓
5	Explain the assessment process? ▪ Check learner readiness for assessment (logbook / self assessment) ▪ Assessment contract to be completed ▪ Preparation of learner (this meeting) ▪ The assessment (observation and knowledge questionnaire) ▪ Judgement of the evidence ▪ Outcome of assessment (competent, not yet competent, need further evidence)	✓
6	Give Learner copies of the following documentation and explain each document ▪ The Assessment Guide which includes ○ The relevant unit standard (s) ○ Assessment contract ○ Assessment plan ○ Observation checklist ○ Knowledge checklist	✓
7	Discuss the assessment plan (complete the assessment plan document) ▪ Allow the learner to participate in the decisions made ▪ Agree on dates, time and venue for the assessment and feedback ▪ Agree on evidence the learner can submit ▪ Agree and explain the assessment methods ▪ Identify and discuss special assessment needs of the candidate ▪ Identify and eliminate unfair barriers (language, disability etc) ▪ Discuss and agree on witness requirements	✓
8	Tell the candidate his/her rights and responsibilities, the assessment procedures and policies ▪ How many times they may be assessed ▪ Appeals process / procedure ▪ Reassessment policy	✓
9	Ensure the assessment environment is appropriate or make special arrangements	✓
10	Discuss moderation	✓
11	Allow the learner opportunity to clarify any items discussed	✓

Learner declaration of acceptance of assessment instruments and relevant documentation: Date:	
Learners Name: <i>Munyisi Ndabeni</i>	Signature <i>M</i>
Assessors Name:	Signature:

INSTRUCTIONS:

The following sections will test your knowledge and you are required to answer all the questions.

All true and false items must be answered.

Once you have finished you may obtain feedback from your assessor on the accuracy of your answer.

LEARNING UNIT 1:

KM-02-KT01: Hand tools and power tools (50%)

Learning Outcome 1:	KT0101 Types, uses and care of hand tools
Learning Outcome 2:	KT0102 Types, uses and care of portable power tools
Learning Outcome 3:	KT0103 Types, uses and care of fixed power tools

Task	Questions Description	Marks
1	Identify hand tools and describe their uses	10

1) Striking tools

Claw hammer: Drives nails into materials and pulls them out using the claw.

Mallet: Delivers soft blows to materials without damaging them

2) Driving tools

Screwdrivers (flat/philips): Tighten or loosen screws.

Hex keys (Allen wrenches): Turn bolts with hexagonal sockets.

3) Cutting tools: A

Hand saw: Cuts wood into different shapes

Chisel: Carves or cuts wood, stone or metal.

4) Gripping and turning tools

Pliers (needle-nose/slip joint): Grip, bend and cut wire.

Locking Pliers (vise grips): Lock onto a workplace to hold it securely.

5) Measuring and marking tools

Tape measure: Used for measuring distances.

Level: Ensures surfaces are perfectly horizontal or vertical

Prying and miscellaneous tools

Pry bar / wrecking bar : Provides high leverage for separating materials.

File : Shapes or smooths hard materials like or wood.

Hand drill : Manually drills holes in materials.

LEARNING UNIT 2:

KM-02-KT02: Measuring and testing instruments (50%)

Learning Outcome 1:	KT0201 Portable electrical measuring instruments
Learning Outcome 2:	KT0202 Types of electrical measuring and testing instruments
Learning Outcome 3:	KT0203 Safe use of measuring and testing instruments
Learning Outcome 4:	KT0204 Construction and operating principles of measuring and testing instruments
Learning Outcome 5:	KT0205 Methods of connecting measuring and testing instruments in circuits
Learning Outcome 6:	KT0206 Applications and methods of using electrical measuring and testing instruments
Learning Outcome 7:	KT0207 Care and maintenance of single and three phase measuring and testing instruments
Learning Outcome 8:	KT0208 Instrument transformers
Learning Outcome 9:	KT0209 Types and functions of panel mounted electrical measuring and testing instruments
Learning Outcome 10:	KT0210 Safe use of panel mounted measuring and test instruments
Learning Outcome 11:	KT0211 Protection of measuring instruments when connected in a circuit.

Task	Questions Description	Marks
2	a) Identify the basic components of various measuring and test instruments and describe the basic principle of operation. b) Describe the applications and methods of using electrical measuring and testing instruments in direct and alternating current circuits.	10

1. Sensor/Transducer: Detects the physical parameter and converts it into a usable signal.

Signal conditioner/Amplifier: Process, scale, or amplifies the sensor to a suitable level for measurement.

Display/Output device: Presents the data, either via an analog pointer/scale or a digital numerical display.

Detection: The sensor or detector interacts with the input stimulus.

Conversion/Amplification: The raw physical signal is amplified, filtered or converted from analog to digital to ensure accuracy.

Indication: The final value is displayed on a screen or dial, often calibrated against known standards.

5) Voltage measurement: Measure electrical potential difference.

Used in DE for battery testing & AC for checking utility power.
Ammeters: Measure electron flow. crucial for verifying load consumption and preventing circuit overload.

Methods of using instruments direct measurement the is directly connected to the circuit.

Clamp-on method: An inductive clamp is placed around a conductor to measure AC current without breaking the circuit.

The instruments and their usage Oscilloscope display signal voltage over time, essential for A.C troubleshooting.

10

m

Task	Questions Description	Marks
3	Describe safety and functionality checks to be performed on measuring and testing instruments before use	5

Visual inspection

Cables and leads: inspection for cracked insulation, frayed wire, or repairs made with electrical tape.

Probes and connectors: Check for damage and ensure probes have shrouded connectors and proper finger guards.

Functional Verification

Test the meter on a known live circuit to verify it reads correctly.

Test on a known dead circuit to verify it reads zero.

Re-test on the known live circuit to confirm continued proper operation.

Safety and rating Verification

CAT rating: Confirm the instrument safety rating matches or exceeds the voltage and energy level of the equipment being tested.

Fuses: Verify that fused current inputs are intact.

General precautions.

Calibration: Ensure the device is within its calibration interval.

PPE: Wear appropriate personal protective equipment.

Environment: Ensure the work area is safe and dry.

Task	Questions Description	Marks
4	a) Describe correct methods of handling and storing measuring and testing instruments b) Describe, with the aid of drawings, the connection of measuring instruments to single phase and three phase circuits	10

@ Handling methods

Gentle handling : Avoid dropping or subjecting instruments to physical shock or strong vibrations.

Cleanliness : Ensure hands are clean and dry before handling.

Proper usage : Use tools only for their intended purpose and within specified limits to avoid damage.

Safety protocols : Use protective equipment when handling equipment near hazards, high temperature or sensitive materials.

Storage methods

Protective containers : Store instruments in their original, padded cases or dedicated, secure and organized cabinets.

Environmental control : Store in dry, clean, and dust-free environment to prevent moisture-related corrosion and contamination.

Temperature stability : Avoid extreme temperatures, as they can cause expansion/contraction of components, affecting accuracy.

m

(B) 3 Phase Wattmeter

m

Task	Questions Description	Marks
5	Describe the various methods of protection when connecting measuring instruments in circuits	10

Overcurrent protection: These devices break the circuit if current exceeds safe limits, protecting the instrument from damage.

Voltage protection devices: Protect against spikes in voltage that can damage sensitive components.

Proper circuit configuration: Ensuring that instruments like ammeters are connected in series and voltmeters in parallel to avoid overloading.

Isolation and insulation: Using isolation transformers to separate the measurement circuit from the main power source.

Safety ratings (CAT) & PPE: Using instruments with appropriate cat ratings for the environment and using insulating gear.

Discharge devices: Using discharging resistors for capacitive circuits to prevent high energy, rapid discharges.
