About the Formative Assessment

Purpose	The purpose of this Formative Assessment is to evaluate learners understanding on the specific outcomes and/or assessment criteria and prepare the learner for the summative assessment. This will show that the learner is ready to be assessed.
Context	This assessment represents the Formative Assessment component and should be completed in the classroom/training room.
Resources	The following are resources needed for this assessment: 1. Learner Guide; and 2. Assessment Preparation.
Instructions to Facilitators	Facilitators will be required to: • Explain the completion of the Formative Assessment to each learner; and • Interview the learner on similar questions, should he/she not be able to write.
Instructions to Learners	Learners will be required to: • Complete the Formative Assessment as per the instructions; • Ensure that all questions are completed; • Ensure that the completion of the workbook is their own work; • Ensure that all annexure are attached to the workbook and clearly referred to;
Assessment Time	Learners are required to complete this assessment within the allocated time frame/hours.

Total Mark	This formative assessment carries a total mark of _ points . In order to meet the pass mark, learners are required to achieve a minimum of 80% of the total marks.

ASSESSMENT APPEALS PROCEDURE

1. A learner has the right to appeal under the following circumstances
 - If the laid down assessment procedures were not followed during assessments
 - If not all evidence available was taken into account during the assessment
 - The assessor was not a subject matter expert or did not have a subject matter expert during the assessment process
 - The assessor did not assess according to the performance criteria and range statement stipulated in the unit standard
 - Not all the range items were available for assessment
2. A learner bringing an appeal against a decision of the assessment will lodge such an appeal with the assessor and the internal moderator within 2 days of the assessment feedback session.
3. A learner bringing an appeal should complete the "Learner's Notice of Assessment Appeal" form before the Appeal Hearing. The form should be handed to the internal moderator or a representative of the SETA.
4. Should the internal moderator re-affirm the assessor's decision, the learner may appeal to the external verifier within 2 days after the initial moderator's feedback session. The external verifier's decision will be final. Should the external verifier re-affirm the assessors' decision, the cost for re-evaluation will be upon the learner. Should the verifier's decision differ from the assessor's decision, the cost for re-evaluation will be borne by the assessor.

ASSESSMENT APPEAL APPLICATION FORM

LEARNER'S NOTICE OF ASSESSMENT APPEAL

TO: The Internal Moderator

A meeting with the internal moderator is hereby requested to discuss the outcome of my assessment.

Internal moderator name _____

PRE-ASSESSMENT MEETING CHECKLIST

Points Assessor must cover in the initial meeting with the learner - Please tick

Item	Points to be covered	Tick
1	Welcome the candidate and put them at ease	✓
2	Explain the purpose of the meeting (why you are there and how long the meeting will take)	✓
3	Explain the ▪ NQF ▪ Credits ▪ Certification process ▪ Learning pathways	✓
4	Explain ▪ Who is involved in the assessment and their role (learners, coach, assessors, managers, moderators) ▪ Principles of assessment (fairness, confidentiality, validity, sufficiency)	✓
5	Explain the assessment process? ▪ Check learner readiness for assessment (logbook / self assessment) ▪ Assessment contract to be completed ▪ Preparation of learner (this meeting) ▪ The assessment (observation and knowledge questionnaire) ▪ Judgement of the evidence ▪ Outcome of assessment (competent, not yet competent, need further evidence)	✓
6	Give Learner copies of the following documentation and explain each document ▪ The Assessment Guide which includes ○ The relevant unit standard (s) ○ Assessment contract ○ Assessment plan ○ Observation checklist ○ Knowledge checklist	✓
7	Discuss the assessment plan (complete the assessment plan document) ▪ Allow the learner to participate in the decisions made ▪ Agree on dates, time and venue for the assessment and feedback ▪ Agree on evidence the learner can submit ▪ Agree and explain the assessment methods ▪ Identify and discuss special assessment needs of the candidate ▪ Identify and eliminate unfair barriers (language, disability etc) ▪ Discuss and agree on witness requirements	✓
8	Tell the candidate his/her rights and responsibilities, the assessment procedures and policies ▪ How many times they may be assessed ▪ Appeals process / procedure ▪ Reassessment policy	✓

Item	Points to be covered	Tick
9	Ensure the assessment environment is appropriate or make special arrangements	✓
10	Discuss moderation	✓
11	Allow the learner opportunity to clarify any items discussed	✓

Learner declaration of acceptance of assessment instruments and relevant documentation: Date:	
Learners Name: <i>Mvuyisi Mdaabeni</i>	Signature: <i>[Signature]</i>
Facilitator Name: <i>Balemmah Tjabadi</i>	Signature: <i>[Signature]</i>

Complete the following questions as per instructions provided

LEARNING UNIT 1:

KM-08-KT01: Low voltage protection (100%)

Learning Outcome 1:	KT0101 Purpose and application of low voltage protection
Learning Outcome 2:	KT0102 Types of low voltage protection
Learning Outcome 3:	KT0103 Low voltage protection parameters and statutory requirements

Task	Questions Description	Marks
1.	Describe the operation and functions of different types of low voltage protective devices including overload relays, fuses, circuit breakers and earth leakage protection devices.	10

(a) Fuse (Thermal protection): A thin strip of metal that heats up and melts when current exceeds its rating, breaking the circuit permanently, offering fast-acting protection.

(b) Circuit breakers (MCB/MCCB - Thermal magnetic protection):
Operation: Uses a bimetallic strip for thermal overload protection (slow trip) and an electromagnet for short-circuit protection (instant trip).

Functions: Protects against overloads and short circuits, resettable after faults are cleared.

(c) Overload relays (Thermal/electronic protection):

Operation: Monitors current drawn by a motor. Thermal relays use bimetallic strips, while electronic relays use sensors.
Functions: Protects motor windings from excessive heating due to long-term overloading.

(d) Earth Leakage Protection devices (ELCB/RCCB/RCD):

Operation: Monitors the balance of current between phase and neutral. If current leaks to earth, it detects the

Rebalance and trips.

Functions: Detects leakage currents, preventing electric shock to people and reducing fire hazards.

Key functions

Overload Protection: Prevents equipment overheating from excessive current over a long period (e.g. motor overload).

Short circuit protection: Instantly interrupts high-fault currents (e.g. phase-to-phase contact).

Earth fault protection: Identifies current flowing to the ground, protecting against lethal shocks and fire.

10

Task	Questions Description	Marks
2	Explain, with the aid of circuit diagrams, how single-and three phase electrical installations are protected.	10

Electrical Protection of 3phase motor

Three phase

Single phase

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

m

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

ASSESSMENT CRITERIA		1	2	3
1	KT0101 Purpose and application of low voltage protection			✓
2	KT0102 Types of low voltage protection			✓
3	KT0103 Low voltage protection parameters and statutory requirements			✓

Application for Assessment

First Attempt ☐ Second Attempt ☐ Third Attempt ☐ RPL ☐

Observer/Witness required: Yes/No

Name: _____

Contact Number: _____

Interpreter required: Yes/No

Name: _____

Contact Number: _____

Was Employer informed of request for Assessment: Yes/No

Type of Assessment: Theoretical

Practical

Recommendation for Assessment

The applicant has completed his/her training, has prepared for the assessment and is now ready to be assessed.

The ETD Practitioner believe that the candidate is ready for the assessment because he has completed the relevant unit standard.

Notification of Assessment

Assessment will take place as follows:

	Theory	Practical
Date		
Time	9H00	9H00
Venue	Employer premises	Employer premises
Instruments	Written assignment	Practical Assessment

Action required from candidate:

Candidate need to prepare him/herself to either write the Questionnaire or conduct Practical Assessment in order to achieve competency towards the relevant unit standard.

ETDP PRACTITIONER

Assessment Planning

	<u>Theory</u>	<u>Practical</u>
Date of assessment:		
When would be the best time for the Assessment?	9H00	9H00

Have you received an application to assess the candidate? Yes
What assessment methods do you consider using? (observation, assignment, presentation, etc.) Explain method. 1. Written Assignment : Printed Questionnaire 2. Observation : As per Practical Assessment Guide 3. Interview : List of Questions as per Practical Assessment Guide after Practical Observation
What resources would you require to conduct the assessment? 1. Assessor toolkit 2. Theoretical assignment 3. Practical assessment 4. Learner toolkit
How would you sequence your activities? Explain 1. Record preparation process 2. Meet with group/candidate and explain assessment procedure – how you are going to conduct the assessment 3. Learner will write summative assessments 4. Conduct observation in workplace where applicable 5. Complete learner toolkit 6. Complete assessor toolkit

Learners Name: <i>Mujisi Mdabeni</i>	Signature: <i>[Signature]</i>
Assessors Name: <i>Balernah yabadi</i>	Signature: <i>[Signature]</i>

INSTRUCTIONS:

The following sections will test your knowledge and you are required to answer all the questions.

All true and false items must be answered.

Once you have finished you may obtain feedback from your assessor on the accuracy of your answer.

LEARNING UNIT 1:

KM-08-KT01: Low voltage protection (100%)

Learning Outcome 1:	KT0101 Purpose and application of low voltage protection
Learning Outcome 2:	KT0102 Types of low voltage protection
Learning Outcome 3:	KT0103 Low voltage protection parameters and statutory requirements

Task	Questions Description	Marks
1	Name and describe the types of low voltage protective devices	20

Miniature circuit breakers (MCB): Commonly used in residential/commercial settings for lighting and small loads, providing automatic interruption during overloads or short circuits.

Molded case circuit breakers (MCCB): Suitable for higher currents (up to 1000A), used for industrial applications, motor protection, and sub-main distribution.

Air circuit breaker (ACB): Designed for large-scale power distribution and industrial systems, offering high interrupting capacities for heavy fault currents.

Fuses (Ceramic/rewirable): Sacrificial devices that contain a metal wire or strip that melts when excessive current flows, breaking the circuits. High rupturing capacity (HRC) fuses are a robust, fast-acting type.

Surge protective devices (SPD): Protect sensitive equipment from overvoltage caused by switching or lightning, either diverting energy to ground or clamping it.

Over/Under Voltage relays: Devices that react to voltage fluctuations, ensuring machinery operates within safe voltage limits, often providing automatic disconnection.

Residual current devices (RCD/ELCB): Protection against earth leakage currents (shock protection) by detecting imbalances between supply and return currents.

Overload relays: Specifically designed to protect electric motors from heating up by allowing temporary overcurrent but tripping if the overload persists.

Thermomagnetic protection: Uses a bimetallic strip for overloads and a magnetic coil for fast short-circuits trips.

Electronic protection: Uses sensors and microprocessors for more precise and adjustable trip thresholds in modern MCCBs and ACBs.

Isolators (Disconnect switches): Manual switches used to completely de-energize a circuit so workers can safely perform maintenance.

Low voltage protective devices are safety mechanisms used in electrical systems ~~used~~ under 1000 volts to stop dangerous overcurrent, short circuits, and ground faults.

Earthing and grounding: Directs dangerous fault currents safely into the earth.

Distance protection: Measures line impedance to locate and isolate the transmission faults.

Fuses: Contain a thin metal strip that melts and breaks the circuit permanently when too much current flows through.

Residual current circuit breaker with overcurrent protection:
An RCB combines the functions of an RCD and an MCB. It provides protection against overload, short circuit and earth leakage/residual current.

Task	Questions Description	Marks
2	Describe the effect of adverse conditions on the operational characteristics of protective devices	10

Key Effects of Adverse conditions:

Extreme temperatures: High temperatures can cause nuisance tripping in thermal-magnetic breakers or cause fuses to melt at lower-than-rated currents.

High humidity and moisture: Moisture causes corrosion of metal components and insulation breakdown, reducing the dielectric strength of insulating materials and causing short circuits.

Contamination and corrosion: Dust, chemicals, and corrosive vapors can interfere with moving mechanisms and degrade contacts, resulting in mechanical jamming or increased contact resistance.

Mechanical stress/vibration: Continued stress can degrade physical components, causing nuisance tripping or physical damage to mounting mechanisms, reducing reliability.

Operational impact on device performance:

Reduced sensitivity: Protective devices may fail to detect low-level faults, leading to delayed action or damage to components.

Unwanted Operation: Environmental factors can cause protective devices to operate during normal conditions, causing unnecessary downtime.

Increased operating time: In extreme conditions, protective devices may fail to meet the required speed of operation.

Learners Name: <i>Muraji Ndabeni</i>	Signature <i>At</i>
Assessors Name:	Signature:

INSTRUCTIONS:

The following sections will test your knowledge and you are required to answer all the questions.

All true and false items must be answered.

Once you have finished you may obtain feedback from your assessor on the accuracy of your answer.

LEARNING UNIT 1:

KM-09-KT01: Fault finding (100%)

Learning Outcome 1:	KT0101 Faultfinding principles for electrical circuits
Learning Outcome 2:	KT0102 Faultfinding techniques for electrical circuits
Learning Outcome 3:	KT0103 Safety during faultfinding

Task	Questions Description	Marks
1	Explain fault finding principles and techniques for alternating and direct current main supply circuits	20

Fault finding principles (AC/DC)

Safety first: Always turn off power and verify circuits are de-energized before testing, especially in high-voltage main circuits.

Systematic approach: Break the circuit into segments to narrow down the fault location rather than testing randomly.

Logical analysis: Use schematics and gathered information to identify potential failed components rather than guessing.

Verification: Test the repair under load to ensure the fault is completely resolved.

Fault finding techniques

Visual inspection: Look for charred components, broken conductors, loose terminals, or burning smells (indicators of overheating).

Voltage testing: Using a multimeter, check if power is reaching the load. In AC, check for correct RMS voltage; in DC, verify polarity.

Continuity testing: Determine if a circuit path is broken by testing for low resistance (near 0Ω).

(7)

Insulation resistance (megger) testing: Measures the resistance between live conductors and earth to detect broken insulation (earth faults).

Functional testing: Activating components (like relays or switches) to see if they react as expected.

2 Dead testing (isolated/de-energized circuits)

Continuity testing: Use an ohmmeter to check if paths are complete or if an open circuit exists.

Insulation resistance (IR) testing: Use megohmmeter (insulation tester) to inject high voltage to check for breakdown between conductors or between live conductors and earth.

Protective conductor continuity: Confirm that earth and bonding paths are intact and possess low impedance.

3 Live testing (energized circuit)

Voltage measurement: Use a high-impedance multimeter to measure voltage drops, confirming whether

Resistance testing

Resistance measurements can help identify:

Open circuits, short circuits, incorrect component resistance, poor connections. The expected resistance should be compared with the manufacturer's specification or circuit calculations.

Current testing: Measurement can indicate: Overloaded circuits, short circuits, open circuits, excessive load current.

An unusually high current may indicate a short circuit or overloaded equipment while zero current in an otherwise energized circuit may indicate an open circuit.

Task	Questions Description	Marks
2	Explain Safety consideration during faultfinding	10

Safety Consideration

Isolation and lockout/Tagout (LOTO): Isolate energy sources (electrical, mechanical, pneumatic) and use locks/tags to prevent unauthorized startup. Example
Verification of zero energy: Always use a calibrated voltage detector to "test before you touch" ensuring the circuit is truly dead, rather than relying on drawings.

Personal protective equipment (PPE): Wear appropriate PPE including insulated gloves, safety glasses, arc-rated clothing, and electrical safety footwear to protect against shocks and arc flashes.

Insulated Tools: Use properly rated, insulated tools to reduce the risk of accidental short circuits when working on or near live equipment.

Safe working procedures:

Live work risk assessment: Only conduct energized work if absolutely necessary, after a formal risk assessment (satisfaction for work)

Standby person: Ensure a qualified person is nearby to assist in case of an emergency.

Removing faulty components: Turn off machinery completely before changing components like fuses or motors.

Synonyms for safety considerations

Fault diagnosis safety protocols

Troubleshooting precautions

Maintenance safety measures

Electrical hazard mitigation
Risk management in repair

About the Formative Assessment	
Purpose	The purpose of this Formative Assessment is to evaluate learners understanding on the specific outcomes and/or assessment criteria and prepare the learner for the summative assessment. This will show that the learner is ready to be assessed.
Context	This assessment represents the Formative Assessment component and should be completed in the classroom/training room.
Resources	The following are resources needed for this assessment: 1. Learner Guide; and 2. Assessment Preparation.
Instructions to Facilitators	Facilitators will be required to: • Explain the completion of the Formative Assessment to each learner; and • Interview the learner on similar questions, should he/she not be able to write.
Instructions to Learners	Learners will be required to: • Complete the Formative Assessment as per the instructions; • Ensure that all questions are completed; • Ensure that the completion of the workbook is their own work; • Ensure that all annexure are attached to the workbook and clearly referred to;
Assessment Time	Learners are required to complete this assessment within the allocated time frame/hours.
Total Mark	This formative assessment carries a total mark of _ points . In order to meet the pass mark, learners are required to achieve a minimum of 80% of the total marks.

ASSESSMENT APPEALS PROCEDURE

1. A learner has the right to appeal under the following circumstances
 - If the laid down assessment procedures were not followed during assessments
 - If not all evidence available was taken into account during the assessment
 - The assessor was not a subject matter expert or did not have a subject matter expert during the assessment process
 - The assessor did not assess according to the performance criteria and range statement stipulated in the unit standard
 - Not all the range items were available for assessment
2. A learner bringing an appeal against a decision of the assessment will lodge such an appeal with the assessor and the internal moderator within 2 days of the assessment feedback session.
3. A learner bringing an appeal should complete the "Learner's Notice of Assessment Appeal" form before the Appeal Hearing. The form should be handed to the internal moderator or a representative of the SETA.
4. Should the internal moderator re-affirm the assessor's decision, the learner may appeal to the external verifier within 2 days after the initial moderator's feedback session. The external verifier's decision will be final. Should the external verifier re-affirm the assessors' decision, the cost for re-evaluation will be upon the learner. Should the verifier's decision differ from the assessor's decision, the cost for re-evaluation will be borne by the assessor.

ASSESSMENT APPEAL APPLICATION FORM

LEARNER'S NOTICE OF ASSESSMENT APPEAL

TO: The Internal Moderator

A meeting with the internal moderator is hereby requested to discuss the outcome of my assessment.

Internal moderator name _____

Date of submission: _____

Name of employee assessed: _____

Name of Assessor: _____

Date of feedback session: _____

Grounds for Appeal

No	Tick the applicable ground(s) for appeal	Tick
1	The assessment did not follow the laid down procedure	
2	Not all evidence available was taken into account during the assessment	
3	The assessor was not a subject matter expert nor was a subject matter expert present during the assessment process	
4	The assessment was not according to the performance criteria and the range statement stipulated in the unit standard	
5	Not all the range items were available for the assessment	

Reasons for Appeal

No	Please give detailed reasons for the choice(s) above

PRE-ASSESSMENT MEETING CHECKLIST

Points Assessor must cover in the initial meeting with the learner - Please tick

Item	Points to be covered	Tick
1	Welcome the candidate and put them at ease	✓
2	Explain the purpose of the meeting (why you are there and how long the meeting will take)	✓
3	Explain the ▪ NQF ▪ Credits ▪ Certification process ▪ Learning pathways	✓
4	Explain ▪ Who is involved in the assessment and their role (learners, coach, assessors, managers, moderators) ▪ Principles of assessment (fairness, confidentiality, validity, sufficiency)	✓
5	Explain the assessment process? ▪ Check learner readiness for assessment (logbook / self assessment) ▪ Assessment contract to be completed ▪ Preparation of learner (this meeting) ▪ The assessment (observation and knowledge questionnaire) ▪ Judgement of the evidence ▪ Outcome of assessment (competent, not yet competent, need further evidence)	✓
6	Give Learner copies of the following documentation and explain each document ▪ The Assessment Guide which includes ○ The relevant unit standard (s) ○ Assessment contract ○ Assessment plan ○ Observation checklist ○ Knowledge checklist	✓
7	Discuss the assessment plan (complete the assessment plan document) ▪ Allow the learner to participate in the decisions made ▪ Agree on dates, time and venue for the assessment and feedback ▪ Agree on evidence the learner can submit ▪ Agree and explain the assessment methods ▪ Identify and discuss special assessment needs of the candidate ▪ Identify and eliminate unfair barriers (language, disability etc) ▪ Discuss and agree on witness requirements	✓
8	Tell the candidate his/her rights and responsibilities, the assessment procedures and policies ▪ How many times they may be assessed ▪ Appeals process / procedure ▪ Reassessment policy	✓
9	Ensure the assessment environment is appropriate or make special arrangements	✓
10	Discuss moderation	✓
11	Allow the learner opportunity to clarify any items discussed	✓

Learner declaration of acceptance of assessment instruments and relevant documentation: Date:

Facilitator Name:	Signature:

Complete the following questions as per instructions provided

LEARNING UNIT 1:

KM-09-KT01: Fault finding (100%)

Learning Outcome 1:	KT0101 Faultfinding principles for electrical circuits
Learning Outcome 2:	KT0102 Faultfinding techniques for electrical circuits
Learning Outcome 3:	KT0103 Safety during faultfinding

Task	Questions Description	Marks
1.	Explain the importance of fault finding	4

Safety assurance! Identifies electrical or mechanical dangers that could injuries, electrocution, or fire, ensuring a safe environment.

Operational efficiency! Minimizes downtime and maximizes productivity by keeping systems running optimally.

Cost savings & Sustainability! Prevents minor issues from becoming major, expensive failures, avoiding unnecessary replacement costs.

Reliability & Performance! Ensures machinery or electrical systems meet, or return to, specified performance standards.

Root cause identification! Moves beyond temporary fixes to understand why a failure occurred, which helps prevent future recurrences.

Task	Questions Description	Marks
2	Explain fault finding principles and techniques for alternating and direct current control circuits	5

Fault finding principles

Systematic approach (5 point method): Gather evidence (symptoms), analyze data, locate the fault, rectify, and test the system.

Safety first! Isolate power, use lock-out/tag-out procedures and confirm dead before touching components.

Divide and conquer (half-split method): Testing the midpoint of a circuit to eliminate half the potential fault area, repeating until the fault is isolated.

Visual/sensory inspection: Checking for burnt, discolored, or loose connections and smelling for burnt insulation.

Techniques for control circuits

Voltage testing (live): Measuring voltage across components (e.g. switches, coils) to ensure they are receiving power. A lack of voltage across a component indicates an open circuit before it.

Insulation resistance testing: Testing for short circuits to ground or between phases, critical in both AC and DC systems.

Alternating current (AC): Focus on phase relationships, frequency, impedance, and checking for chatter in contactors or relays caused by low voltage or high impedance.

Direct current (DC): Pay close attention to polarity; reversed polarity can damage components (e.g. diodes, capacitors, sensors).

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

OUTCOME		1	2	3

Application for Assessment

First Attempt ☐ Second Attempt ☐ Third Attempt ☐ RPL ☐

Observer/Witness required: Yes/No

Name: _____

Contact Number: _____

Interpreter required: Yes/No

Name: _____

Contact Number: _____

Was Employer informed of request for Assessment: Yes/No

Type of Assessment: Theoretical

Practical

Recommendation for Assessment

The applicant has completed his/her training, has prepared for the assessment and is now ready to be assessed.

The ETDP Practitioner believe that the candidate is ready for the assessment because he has completed the relevant unit standard.

Notification of Assessment

Assessment will take place as follows:

	Theory	Practical
Date		
Time	9H00	9H00
Venue	Employer premises	Employer premises
Instruments	Written assignment	Practical Assessment

Action required from candidate:

Candidate need to prepare him/herself to either write the Questionnaire or conduct Practical Assessment in order to achieve competency towards the relevant unit standard.

ETDP PRACTITIONER

Assessment Planning

	<u>Theory</u>	<u>Practical</u>
Date of assessment:		
When would be the best time for the Assessment?	9H00	9H00

Have you received an application to assess the candidate? Yes

What assessment methods do you consider using? (observation, assignment, presentation, etc.) Explain method.

1. Written Assignment : Printed Questionnaire

2. Observation : As per Practical Assessment Guide

3. Interview : List of Questions as per Practical Assessment Guide after Practical Observation

What resources would you require to conduct the assessment?

1. Assessor toolkit
2. Theoretical assignment
3. Practical assessment
4. Learner toolkit

How would you sequence your activities? Explain

1. Record preparation process
2. Meet with group/candidate and explain assessment procedure – how you are going to conduct the assessment
3. Learner will write summative assessments
4. Conduct observation in workplace where applicable
5. Complete learner toolkit
6. Complete assessor toolkit
